

Gypsum Wallboard: Mold & Stain Control. Moisture Control. Outstanding Durability.

Protection You Can Count On.

Microbial staining and contamination are of concern to consumers and builders alike. Wallboard protected by the ÆGIS Microbe Shield® is mold and mildew resistant.

ÆGIS Means Solutions.

From product development through launch, ÆGIS support includes state of the art microbiological testing, registration expertise, marketing assistance, and complete quality control.

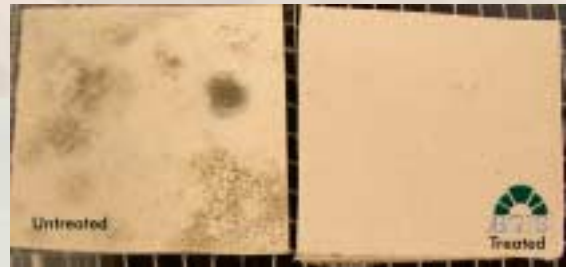

The ÆGIS Quality Control Program is based on a unique visual indicator that binds directly to the antimicrobial agent. It is used for quality control and provides assurance of a uniformly treated surface.

Verification that the gypsum wallboard has been properly treated is quick and easy.

Proven Performance.

Paper used on gypsum wallboard was treated with the ÆGIS Microbe Shield technology under actual process conditions and then tested using the industry standard ASTM D3273 test. As shown below, the material protected by the ÆGIS Microbe Shield technology had excellent performance.

Treated samples are protected against a broad range of fungi.

A Cost Effective Solution to Mold.
